

Bay Goose Dike Project

It is a tremendous pleasure to announce that the Bay Goose Dike Project was handed to FGL, in June 2009.

Agnico-Eagle once again trusted our dynamic team who previously was able to demonstrate its expertise with the East Dike Project. This large-scale project will be carried out in two different stages and therefore will offer many new challenges inherent to its size (covering more than 2km) as well as to its limited time window (both North and South areas will have to be completed within 3 months). This news will have a positive impact on the recovering Quebec economy and job stability for the next two years.

Congratulations to our team! As well to our partners; Concassage TCG and Injection TCG. Their contribution to this project will guarantee its success.

The FGL team
