

Innovation Award CSST Saguenay-Lac-Saint-Jean

On October 16th 2009, Dynamitage TCG attended the Innovation Award ceremony and received the regional finalist award for the design of shelters for earth-boring machine used at the Meadowbank site in Nunavut. Thanks to all who participated in this innovative project which contributed to the improvement of our workers' health and safety. Unfortunately, at this time, we were not awarded the first price.

The TCG Consolidation team is actually completing the injection of two dikes for the Canadian Malartic gold mine project in Abitibi, which will be the largest open-mine site in Canada in 2011. The Osisko Corporation decided to call on to our injection specialist's expertise to carry out their projects, according to the highest standards. Congratulations to our team!

Chute-Garneau power plant on the Chicoutimi River

Dynamitage TCG will carry out blasting works for the construction of a new plant in Chute-Garneau on the Chicoutimi River. Paul Pedneault Inc., General Contractor, chose to trust Dynamitage TCG to carry out these tasks requiring extreme precision. The blasting works will take place at the foot of the existing dam to allow the installation of a new turbine, owned by Ville Saguenay.

Meadowbank Dynamitage TCG team

The Meadowbank Dynamitage TCG team was very active this summer. Without being disturbed by the hustle going on at FGL, our team ensured an ongoing drilling and blasting service for Agnico-Eagle, while preparing the injection season that will begin in April 2011. We foresee a very busy fall schedule with the preparation phase of injection equipment, casing drilling, drilling and blasting mine works. Congratulations to our team for becoming indispensable to Agnico-Eagle due to its exceptional work.

Bernard Vachon, Geological Engineer, General Manager, Dynamitage TCG
